*Class diagram

- No packages

- incorrect class name "customer" it
  should be consumer

- pitfalls in expends class
  → incorrect and poorly names
    - date
    - name

- Incorrect class name JsonFile Manager
  it should be named Main Data Manager instead

- The diagram have two orphan classes

- On MainDataManager don't exist
  datatype

* Code

- Named changed in model package
  of class MainDish in class diagram
  the name is Dish

- No inventory class in code

- No income class in class diagram

- No accounting report class in code

- Extra classes

  - dashboard class

  - adminData Manager class

  - product class

  - Inventory Data Manager class

  - Invoice Manager class

  - Order Manager class

  - Transaction Manager class

- Program

① No json for dishes

② Incomes and expenses

    add income
    add expenses] - works
    generate balance] correctly

③ cashier

    No cashier json
    └ cashier aren't saving so
    when the program ends the
    data dissappear

④ No json for orders

* The are a lot of missing json files for
many functions
